

# D&L Twin Saw

HIGHER YEALD WITH LESS WASTE

WORLDS MOST VERSATILE PORTABLE SAWMILL

## A COMPLETE WOOD PROCESSING SOLUTION

D&L Timber Technologies is the leading provider of innovative, quality portable sawmills and value-added wood processing equipment. Since 1950, our worldwide customers have trusted us to identify and provide the best solutions for all wood processing applications.

See the difference at [www.dltimbertech.com](http://www.dltimbertech.com)

- ▶ 2 Saw Sawing
- ▶ Multiple Attachments
- ▶ Build-In Edger
- ▶ One Man Operation
- ▶ Robust Design
- ▶ Board Return

## The Advantages

The head saw cuts first and as the edger saw trails the log tension is released. The results are higher yields and less waste.

## The Edger Saw

The edger saw exits the cut last preventing the head saw from grabbing the board. The horizontal splitter which trails the edger saw keeps the board off of the saw blade.

## Cost of Operation

The Twin Saw is one of the most economical mills on the market. Eight hours of operation will cost \$20\* as compared to the \$60 to \$80 required for other conventional mills.

- Based on \$2.00/day for inserted saw teeth and at 3.5 gallons of diesel or 5 gallons of gasoline for 8 hours of operation.

I have been involved with D+L Timbertech sawmills for 15 plus years. First unit was a gas powered TS24 which was up graded to a Yanmar diesel TS36. Spruce, pine and white poplar is used to produce dimensional lumber. Service from both mills have been great, and TS36 is a real workhorse day in and out. Issues have been minimum and easily resolved with support from D+L Timbertech. Looking forward to many more years as a Twin Saw sawyer.

## PERFORMANCE DRIVEN DESIGN

The D&L Twin Saw Series is manufactured with stainless steel and aluminum for maximum portability and durability.

Quick repair and replacement using off the shelf parts eliminates unnecessary downtime.

The unique guard design protects the operator at all times and swings with the blade.

A double riving knife follows the blade to prevent entering the cut backwards when doublecutting.

The portable trailer system features easily adjustable feet and quick, fast setup.

Additional value adding attachments can be purchased for twin saw models.

The mill is transported fully assembled by small pick-up.

The Twin Saw is available in multiple sizes and models to fit your requirements.

	TS 30G	TS 36DTH	TS 60DTH
	38hp EFI Gas	46hp Diesel	66hp Diesel
Optional Diesel Power	46HP	57hp	Standard
